

# APBI 402 / SOIL 502

## SUSTAINABLE SOIL MANAGEMENT

UBC's Point Grey Campus is located on the traditional, ancestral, and unceded territory of the xwməθkwəyəm (Musqueam) people. The land it is situated on has always been a place of learning for the Musqueam people, who for millennia have passed on in their culture, history, and traditions from one generation to the next on this site.

[Added on Jan 13, 2022 following UBC announcement] Due to the current COVID-19 situation, all classes for APBI 402 will be online until Feb 7, 2022. See details in Canvas. Please note that lectures will be not recorded as pre-recorded videos are provided in Canvas.

### TERM 2 - 2021/22

<b>Course Instructors*:</b>	Maja Krzic, MCML 227	<a href="mailto:Maja.Krzic@ubc.ca">Maja.Krzic@ubc.ca</a>
	Sandra Brown, MCML 229	<a href="mailto:Sandra.Brown@ubc.ca">Sandra.Brown@ubc.ca</a>
<b>Case Contributors:</b>	Shannon Berch, BC Min. Environment, Victoria	<a href="mailto:Shannon.Berch@gov.bc.ca">Shannon.Berch@gov.bc.ca</a>
	Mike van Ham, SYLVIS, New Westminster	<a href="mailto:mvanham@sylvis.com">mvanham@sylvis.com</a>
	Art Bomke, MCML 233	<a href="mailto:art.bomke@ubc.ca">art.bomke@ubc.ca</a>
	Sue Grayston, FSC 3006	<a href="mailto:Sue.Grayston@ubc.ca">Sue.Grayston@ubc.ca</a>
	Cindy Prescott, FSC 3040	<a href="mailto:Cindy.Prescott@ubc.ca">Cindy.Prescott@ubc.ca</a>
<b>Lectures:</b>	Friday @ 1 – 2 pm [in-person McML 160; <b>online until Feb 7 via zoom link provided in Canvas</b> ]	
<b>Tutorial:</b>	Monday @ 3- 5 pm [in-person EOS 135; <b>online until Feb 7 via zoom link provided in Canvas</b> ]	

*\*Maja and Sandra are the appropriate contact persons regarding the general conduct of the course and some of the cases.*

*Drs. Berch, Bomke, Grayston Prescott, and Mr. van Ham prepared one case each and will be contributing their expertise during that specific unit of the course.*

**If you or one of your family members has the COVID-19 virus, please contact Student Services in your Faculty immediately, so that we can explore concessions (if needed) that will not negatively impact your grades.**

#### Course Description:

Application of fundamental, unifying soil science principles in sustainable management of forested, agricultural and urban or constructed ecosystems.

#### Approach:

To simulate a real-life evaluation of soil properties to establish the most appropriate management practice in a particular ecosystem.

### Course Learning Outcomes:

Upon completion of APBI 402 / SOIL 502 students will be able to:

- Describe processes of soil genesis, recognize diagnostic features of natural soils, and relate management practices to information available in soil survey reports or other sources of information.
- Utilize physical, chemical and biological soil quality indicators to assess sustainability of land management practices.
- Characterize the soil chemical environment and its modification to enhance plant, animal and human health. (Specific topics may include: liming, fertilization, and remediation of chemical contamination).
- Describe soil biological processes with regard to nutrient cycling and management of organic inputs. (Specific topics may include: maintenance of soil organic matter, carbon sequestration, and recycling of various organic materials such as manures, biosolids, and green manures).
- Describe the soil physical environment and its manipulation and/or degradation in ecosystem management. (Specific topics may include compaction, trafficability, water management, soil erosion).
- Discuss the relationship of soil management to government and private sector policies. (Specific topics may include Forest practices code, urban development regulation, right to farm and farmland preservation legislation, environmental farm planning, and land reclamation legislation).

### Course Format:

APBI 402 is run in conjunction with SOIL 502, with students enrolled in both courses participating in a modified problem-based learning (PBL) environment to meet the course learning outcomes listed above.

The course learning outcomes will be met through 3 PBL case studies, each 4 weeks in duration. Groups of 4-6 students will be assigned either a **forestry**, **urban**, or an **agricultural** land management regime in which to pursue the case study learning outcomes. Groups will be organized to facilitate interdisciplinary discussion and to provide opportunities for students from different programs to benefit from their varied experience and educational backgrounds. Each case will conclude with presentations from each group to enable a comparison of approaches within different land uses.

In addition, individual students will prepare 1,000 word reports, summarizing their own personal learning for each case.

There is no textbook for the course; background readings will be drawn from a variety of sources.

### Course Marks:

APBI 402 - Sustainable Soil Management			SOIL 502 - Advanced Sustainable Soil Management		
Final exam	35%		Final exam	35%	
Case reports prepared by individuals (3) <sup>a</sup>	39%		Case reports prepared by individuals (3) <sup>a</sup>	30%	
Case seminars prepared by groups (3) <sup>b</sup>	21%		Case seminars prepared by groups (3) <sup>b</sup>	21%	
			Wikipedia article (1) <sup>c</sup>	9%	
Class participation <sup>d</sup>	5%		Class participation <sup>d</sup>	5%	
Bonus points <sup>e</sup>	2%		Bonus points <sup>e</sup>	2%	

<sup>a</sup>**Written case reports** of 1,000 words will be prepared by individual students and will be due a week after the group presentations. Written case reports will be assessed on the basis of content and quality of writing (for more details see section on "Case Report-Writing Tips" shown at the end of this syllabus). Content of the individual case reports should demonstrate that the student has achieved the case learning outcomes and is able to discuss them in the context of the case scenario. Also, in 1-2 paragraphs each student should compare (relate) learning outcomes of his/her case to the cases presented by other groups. All reports should be handed in on

time and **10% mark subtraction** will be made for each day being late. **Late case reports, passed day 4 will not be accepted.** IF you are ill or have extenuating circumstances which prevent you from submitting on time, please contact your instructors and a one-time extension may be granted.

<sup>b</sup>**Group presentations** will be judged based on content, structure, and delivery. More detailed criteria for group presentations are given at the end of the course syllabus.

<sup>c</sup>**Wikipedia article for SOIL 502 students** of approximately 1,500 words on a soil management topic to be negotiated and approved by the course instructors.

<sup>d</sup>**Class participation** will be assessed on the basis of contribution to in-class (verbal) and online (written) discussions.

<sup>e</sup>**Bonus points** of up to 2% will be awarded for attending annual workshop of the Pacific Regional Society of Soil Science (PRSSS) to be held at UBC in March. The attendance is strongly recommended. Up to 2% will be awarded for workshop attendance and ~500 word synopsis of the workshop written from the student's perspective and suitable for publication in the PRSSS Newsletter.

It is highly recommended that students attend SOIL 500 – Soil Science seminar (every Friday at 3-4 pm) since most seminar topics will be complementary to what we are covering in this course.

## COURSE OUTLINE

**Course Introduction** (Week 1) General concept of soil quality and sustainable land management

**Case 1:** (Weeks 1 through 5)

Case specific learning outcome: Describe soil physical environment and its manipulation and/or degradation in ecosystem management.

Case scenarios:

- Forestry: Impacts of mechanical disturbance on soil quality on forest landings
- Agriculture: Cattle grazing impacts on soil quality on grasslands
- Regional development: Soil erosion in the middle mountains in Nepal

**Case 2:** (Weeks 5 through 9)

Case specific learning outcome: Characterize the soil chemical environment and its modification to enhance plant, animal and human health.

Case scenarios:

- Forestry: Effects of site management practices on soil quality of plantation forests in the Southern Cape forest region of South Africa
- Agriculture: Soil testing as a tool for monitoring soil quality; the UBC Farm Case
- Managed landscape: Fabricated soil mixtures used as cover for Vancouver Landfill
- Forest nutrition management on a woodlot
- Community garden; the 38<sup>th</sup> street community garden case

**Case 3:** (Weeks 9 through 13)

Case specific learning outcome: Describe soil biological processes and application to nutrient cycling and management of organic inputs.

Case Scenarios:

- Forestry: Soil fauna on the long-term soil productivity (LTSP) sites in BC
- Forestry: Effects of variable retention harvesting on soil microbial communities in Coastal BC Forests
- Agriculture: Soil mesofauna on grazed rangelands in BC

## UBC Policy & Academic Honesty

UBC provides resources to support student learning and to maintain healthy lifestyles but recognizes that sometimes crises arise and so there are additional resources to access including those for survivors of sexual violence. UBC values respect for the person and ideas of all members of the academic community. Harassment and discrimination are not tolerated nor is suppression of academic freedom. UBC provides appropriate accommodation for students with disabilities and for religious observances. UBC values academic honesty and students are expected to acknowledge the ideas generated by others and to uphold the highest academic standards in all of their actions.

Details of the policies and how to access support are available on [the UBC Senate website](#).

**Academic honesty** is a core value of scholarship. Cheating and plagiarism (including both presenting the work of others as your own and self-plagiarism), are serious academic offences that are taken very seriously at the University of British Columbia. By registering for courses at the University of British Columbia, students have initiated a contract with the university that they will abide by the rules of the institution. It is the student's responsibility to inform themselves of the University regulations. Definitions of Academic Misconduct can be found on the following website:

<http://www.calendar.ubc.ca/vancouver/index.cfm?tree=3,54,111,959#10894>

If you are unsure of whether you are properly citing references, please ask your instructor for clarification before the assignment is submitted. Improper citation will result in academic discipline.

## APBI 402 / SOIL 502 - Schedule for tutorials and lectures

Week	Date	Tutorial (Mon 3-5pm)	Date	Lecture (Fri 1-2pm)
1	Monday Jan 10	<b>Lecture:</b> Course intro & review of some relevant soil concepts	Friday Jan 14	<b>Lecture Maja:</b> Introduction to soil quality concept <b>Case 1 (Soil physics):</b> <ul style="list-style-type: none"> <li>Impacts of mechanical soil disturbance on soil quality on forest landings in BC</li> <li>Soil erosion in the middle mountains in Nepal</li> <li>Cattle grazing and its impacts on soil quality</li> </ul>
2	Monday Jan 17	<b>Case 1 (Soil physics)</b> 3-4pm: <b>Lecture Maja</b> Physical attributes of soil quality 4-5pm: Group work	Friday Jan 21	<b>Case 1 (Soil physics)</b> Group work
3	Monday Jan 24	<b>Case 1 (Soil physics)</b> 3-4pm: <b>Lecture Sandra</b> Soil Erosion 4-5pm: Group work	Friday Jan 28	<b>Case 1 (Soil physics)</b> Group work
4	Monday Jan 31	<b>Case 1 (Soil physics)</b> Group work	Friday Feb 4	<b>Case 1 (Soil physics)</b> Group work to assist groups and individual students to prepare for oral presentations and written reports
5	Monday Feb 7	<b>Case 1 (Soil physics)</b> Group presentations and synthesis	Friday Feb 11	<b>Lecture Sandra:</b> Chemical soil quality indicators: productivity or sustainability? <b>Case 2 (Soil Chemistry):</b> <ul style="list-style-type: none"> <li>Effects of site management practices on soil quality of plantation forests in the Southern Cape forest region of South Africa</li> <li>Soil fertility assessment of the UBC Farm</li> <li>Soil chemical assessment of fabricated mixes as the Vancouver Landfill</li> <li>Forest nutrition management</li> <li>Soil fertility assessment of the Riley Park community garden</li> </ul>

	Monday Feb 14	<b>Case 2 (Soil chemistry)</b> 3-4 pm: <i>Lecture Mike van Ham</i> Use of biosolids to create constructed soils 4-5pm: Group work	Friday Feb 18	<b>Case 2 (Soil chemistry)</b> Group work
6	Monday Feb 21	<b><i>Feb 15-Family Day - UBC closed</i></b> <b><i>Reading break – UBC closed</i></b>	Friday Feb 25	<b><i>Reading break - UBC closed</i></b>
7	Monday Feb 28	<b>Case 2 (Soil chemistry)</b> Group work, and Cindy Prescott visits with her case group	Friday Mar 4	<b>Case 2 (Soil chemistry)</b> Group work
8	Monday Mar 7	<b>Case 2 (Soil chemistry)</b> Group presentations and synthesis	Friday Mar 11	<b><i>In-class activity Sandra:</i></b> The role of soil organisms in soil quality <b>Case 3 (Soil biology):</b> <ul style="list-style-type: none"> <li>• Soil fauna at a LTSP site</li> <li>• Effects of long-term grazing on abundance and diversity of soil mesofauna</li> <li>• Effects of variable retention harvesting on soil microbial communities in coastal BC forests</li> </ul>
9	Monday Mar 14	<b>Case 3 (Soil biology)</b> Group work	Friday Mar 18	<b>Case 3 (Soil biology)</b> Group work
10	Monday Mar 21	<b>Case 3 (Soil biology)</b> 3-4pm: <i>Lecture Shannon Berch</i> Soil biota and forest productivity 4-5pm: Group work	Friday Mar 25	<b>Case 3 (Soil biology)</b> Group work
11	Monday Mar 28	<b>Case 3 (Soil biology)</b> Group work	Friday Apr 1	<b>Case 3 (Soil biology)</b> Group work
12	Monday Apr 4	<b>Case 3 (Soil biology)</b> Group presentations and synthesis	Friday Apr 8	<b><i>Closing lecture</i></b> – Maja & Sandra

# **Group Presentations: Components & Judging Criteria**

Group presentations will be judged based on content (60%), structure (30%), and delivery (10%).

## **Content (60%)**

1. Content was presented in a clear and concise manner.
  - a. Explains theory and potentially complex material clearly (e.g., no jargon or jargon is explained).
  - b. There was sufficient detail for an out-of-field observer to follow the presentation.
2. Objective for your case study was clearly articulated, and the role of soil type relative to management discussed.
3. Provide explanation on how were data collected (e.g., study sites and management treatments are described, differences among soil types are explained).
3. Include your framework and discuss key indicators and processes specific to your function.
4. Explain the key findings of your study case (e.g., summary of main points, suggestions for future research/directions, thought-provoking comments on where do we go from here).
5. At the end of your presentation, post 2 questions about the most relevant findings of your case.

## **Structure (30%)**

1. The presentation started in a manner that captured the audience's interest and was relevant to the body of the presentation.
2. The points were presented in a logical manner, including a clear study design / explanation of management treatments.
3. The presentation is closed in a manner that links key findings to the study case's objective.
4. Length (kept to allotted time – maximum 20 minutes).

## **Delivery (10%)**

1. The students' presentation kept the audience's interest and engaged the interest and participation of the other groups.
2. Audio-visual aides were used in a manner that supported the presentation. Slides should not include unnecessary acronyms or symbols. Tables and graphs should include only key information needed to make your point.
3. Speech: projected well (everyone could hear), presenters did not speak too quickly.
4. Handled questions well (if did not understand question paraphrased back to the questioner, demonstrated critical thinking if answer is not immediately obvious, makes an educated guess, if does not know the answer says so, shows confidence in ability to answer questions).

**Sample presentation outline:**

- Title page
- Objective
- Study site
- Soils
- Treatments / study design
- Framework (multiple slides)
- Data and interpretation (multiple slides)
- Implications / recommendations
- 2 questions (for classmates)

## Case Report: Writing Tips & Grading Criteria

**Word limit of 1,000 words** does **not** include tables, figures, list of references, cover page, and appendix (assuming that you decide to include an appendix in your paper).

Reports must be written in your own words.

•Tips on how to approach preparing the case report:

- ↳ Before you start writing the report, make an outline and identify the key sub-sections.
- ↳ During the writing process, refer frequently to the learning outcomes to keep yourself on track.
- ↳ Before you submit the paper, make sure that it is **correct, clear, concise, consistent, and complete** (so-called 5 Cs of communication).

### **CONTENT (40%)**

- Provide background information on the study site(s) and management practices (or treatments if your case is done on an experimental field) as well as soil type, climate, topography, parent material, and type of vegetation on the study site(s). Soil type should be discussed regarding its natural advantages and disadvantages for a specific management practice.
- Outline study objective(s).
- Develop a soil quality framework [**Function → Process → Attribute (Property) → Indicator**] and justify selection of indicators focusing on the management practice of your case study.
- Discuss key data of your case study, ensuring that you address both data trends and connections among different groups of data.
- Briefly summarize the body of your report and restate your argument. Always remember to check do your conclusions match the study objective(s).

### **ORGANIZATION (20%)**

- Use logical structure appropriate to report's topic.
- Provide background information on case setup (e.g., study treatments, soil, climate) and integrate it with data discussion.

### **COMPARISON TO OTHER CASES (30%)**

- In 1-2 paragraphs, compare and/or relate key findings of your case to the cases presented by other groups. Focus on the soil function, processes and properties (indicators), avoiding any elaboration of different management practices used in different case studies. Consider developing a table highlighting similarities and differences between cases.

### **GRAMMAR AND WRITING STYLE (10%)**

- Ensure that your report is free of spelling, punctuation, and grammatical errors.
- Keep your sentences simple. That does not necessarily mean that your thoughts are simple. Complex and adjective-laden sentences just make your great ideas hard to follow.
- Each paragraph should contain one main idea. Paragraphs should be logically organized. For example, you should discuss ideas in the order in which they appear in your introduction.
- We strongly encourage you to refer to “**Professional Communications Handbook**” by Garland and Shackleton (<http://lfs-lc-collabtm.sites.olt.ubc.ca/files/2013/11/professional.communication.handbook.pdf>).

**Sample report outline:**

- Background (includes problem statement)
  - Objective
  - Study site
  - Soils (& their relevance)
  - Treatments / study design
- Framework
  - Justification for indicators
- Data & interpretation
- Summary, implications and recommendations (short)
- Case comparison
- References

Use of subheadings is strongly recommended
